KeyesArchive™

Version 7.0

iSeries Archive Software

Introduction

KeyesArchive is used to archive whole spooled files to your IFS, and optionally index the individual documents or reports within those spooled files. It gives you all the tools needed to locate and restore whole spooled files or individual documents, whenever you may need them.

Other types of PC documents, such as scanned images or word processing documents, can also be archived and indexed with your spooled files. KeyesArchive contains everything needed for browsing through your archived documents, with either an Internet browser interface or a green-screen. You can view or print the documents, convert them to PDF files and optionally encrypt them. It also contains built-in links for faxing and e-mailing.

Archived Spooled files can be *SCS printer files, *AFPDS, or *USERASCII. Complete spooled files, including all their attributes, or PDF files are saved and restored from the IFS and optionally compressed. This will ensure forward and backward compatibility with all other software products for now and the future.

Simple Installation

The software can be easily downloaded from our website and installed on any IBM i, iSeries or AS/400 computer.

Application Program Interface

We have included an API in the system so that you can archive spooled files directly from your applications.

Output Queue Monitoring

We have also included an output queue that is monitored so that you can route spooled files for automatic archiving. The spooled files will be immediately archived with any indexing that you have defined. Each spooled file is then either held, deleted, or moved to another output queue and released, as you desire.

Requirements

Hardware

Any model IBM i, iSeries, (AS/400) Computer

Software

OS/400 Version 7 Rel 1 or higher
Compatible with all third party software

Support

Hot-line technical support

Computer Keyes provides hot-line and e-mail technical support to assist you in the use of KeyesArchive software.

Annual Maintenance

The first year of maintenance is free. Thereafter, an annual maintenance fee of 20% of the current price will keep your system current and bug free.

Pricing *(All Models) - As of 1/01/23*

$4250.00   Multi-copy discounts are available.

Guarantee

30 Day Free Trial period

Since 1978 Computer Keyes has offered a 30 day free trial period on all software. This allows you to try out the complete package before making any decisions.

No Bug Guarantee

While on maintenance, if KeyesArchive does not perform a function as intended, Computer Keyes will send you a correction, usually the same day that it is reported.
