

KeyesPDF™

Version 7.0

iSeries Spooled File Conversion Utility

Introduction

KeyesPDF can be used to convert any type of spooled file into an image or PDF document. The PDF documents can be optionally password encrypted, for e-mailing or posting to a Website.

Spooled files can be standard *SCS printer files, *AFPDS spooled files, or *USERASCII spooled files made from third party forms packages. The spooled files will be converted into either TIFF images, PDF documents, or ASCII text and placed either in a Physical File, copied to your IFS, to a Network drive, or sent to a printer. You can also e-mail the resulting documents, or transfer them to another destination, as desired.

For example: You can call our API to convert a spooled file into a PDF document and have it placed in your IFS (Integrated File System), making it available to everyone with access to your system.

Simple Installation

The software can be easily downloaded from our website and installed on any iSeries or System i computer. An install procedure will automatically create all of the necessary subsystem objects in the KeyesPDF library.

Application Program Interface

We have included an API in the system so that you can automatically convert spooled files directly from your applications. The API is a command that you can easily process in any CL program.

Output Queue Monitoring

We have included an output queue that is monitored so that you can route spooled files for automatic conversion. Your spooled files will be immediately converted with automatic indexing to the locations that you specify.

KeyesOverlay™

With the addition of KeyesOverlay, you can rapidly convert standard *SCS printer files into professional graphical documents, in either black&white or full color.

Requirements

Hardware

Any model iSeries, IBM i, or AS/400 Computer

Software

OS/400 Version 7 Rel 1 or higher

Compatible with third party forms packages

Support

Hot-line technical support

Computer Keyes provides hot-line and email technical support to assist you in the use of KeyesPDF software.

Annual Maintenance

The first year of maintenance is free. Thereafter, an annual maintenance fee of 20% of the current price will keep your system current and bug free.

Pricing (All Models) – As of 1/01/23

\$1500.00 Multi-copy discounts are available.

Guarantee

No Bug Guarantee

While on maintenance, if KeyesPDF does not perform a function as intended, Computer Keyes will send you a correction, usually within one day.
